

Please reject NAB's petition 04-160. This misguided attempt to eliminate the competition and better public service provided by satellite radio on the public airwaves hurts us all.

If old technology can limit the usefulness of new technology in this instance, who knows what will be next.

Will the FCC allow analog television makers to limit the innovation of digital programming and high definition television just to save old technology?

How can you consider creating such a monopoly over certain kinds of programming and dare I say speech?

If any type of programming is allowed anywhere, it should be allowed everywhere by anyone.

Save radio and save free speech by rejecting NAB's petition 04-160.
